

The Wonderful World Of Frequency

Dr. Steve Denehie

All of us have turned on a radio or a television, selected a station and enjoyed a broadcast.

We, being **unable to see the actual waveform of the frequency selected**, rely on the signal being transformed by the wonder of circuitry in the radio or television, into an audible and/or visual manifestation of that frequency. This is true of a microwave oven or a cell phone and many other electrical devices we use daily and pretty much take for granted.

The selection of a power level in a microwave oven or the entering of a phone number into a cell phone **uses a unique frequency to obtain a desired result**.

As a young boy our home had a large console radio we listened to. It had several selector switches and a large tuning dial as well as a big speaker, many tubes and wires, and was hooked to an external antenna.

This **wonderful electrical machine** allowed us to **selectively dial a frequency** and listen to radio shows like Gunsmoke, Suspense, Amos and Andy, Groucho Marx and many more. **The machine was designed to manipulate energy to be used for a specific task**. In addition the radio could be tuned to frequencies allowing us to listen to broadcasts from **all over the world** in languages we had never heard before. Police calls, airport traffic, Morse code transmissions could be heard by selectively dialing their unique frequencies as well.

When I went to high school, I made a friend who worked at a radio station. He opened my understanding to the transmitting portion of radio frequency signals. A radio station, a radio receiver, a cell phone, and many other devices must have a power source, circuitry, and a means of displaying the converted a signal into a useable form. These invisible **frequencies are organized information having some effect** on life as we know it. This technology is not new; we have all been using it and really do not think much about how it works.

Everything we know of, everything in existence, including the human body, its' components and things that effect its' well-being **has a frequency**. That **frequency is a specific number** that belongs to it only. Just as a local radio station has a frequency number such as 99.7, so does everything else. The **frequency number is an indication of the vibrational activity of the atomic and molecular structure of matter and energy**. That frequency number **resides in a highly organized position in the Electromagnetic Spectrum** giving it

identity and location. This assigned number, just as a radio station, enables one with the right circuitry to **find and utilize it.**

What if it were possible to balance the body with a specific frequency? **What if** it were possible to identify a frequency causing an imbalance in the body and neutralize it? **What if** frequency could be directly applied to food and water, energizing it or nullifying toxic chemicals?
